How one engine runs every call

Every inbound, outbound, and web call flows through SnapServe's real-time orchestration engine — wired to best-in-class AI models, telephony carriers, and every business system, all on a shared control plane.

NEXT — OWN THE FULL STACK

SnapServe is building its own **STT, LLM & TTS models** — India-optimised and fully owned.

Owning the model layer turns per-minute provider fees into proprietary IP: higher margin, a deeper moat, and accuracy tuned for Indic voice.
