OVERVIEW

What is SnapServe?

SnapServe is an AI voice agent orchestration platform. It sits between your telephony provider and AI models - handling everything from speech recognition to response generation to text-to-speech - so your agents can have natural, intelligent conversations over any phone call.

STT

Speech Recognition

Real-time transcription via Deepgram, Azure, Whisper & Sarvam. Supports Hindi, Tamil, Telugu, Malayalam, English and more.

LLM

Conversation Engine

Powered by OpenAI, Anthropic, DeepSeek, Mistral or Cohere. Custom system prompts, tools and personas per agent.

TTS

Text-to-Speech

Natural voice via ElevenLabs, OpenAI, AWS Polly, Azure, Cartesia or Deepgram. Choose the voice that fits your brand.

TEL

Telephony

Works with Twilio, Plivo, VoBiz and Vonage. Handles inbound calls, outbound campaigns, warm transfers and IVR flows.

MEM

Caller Memory

Remembers facts, preferences and history across every call. Never asks the same question twice. Greets callers by name.

CAL

Smart Scheduling

Built-in booking engine with Google Calendar sync, availability windows, slot management and email notifications.

> *"Deploy your first AI voice agent in under 10 minutes. No engineering team. No complex integrations. Just configure, connect, and go live."*

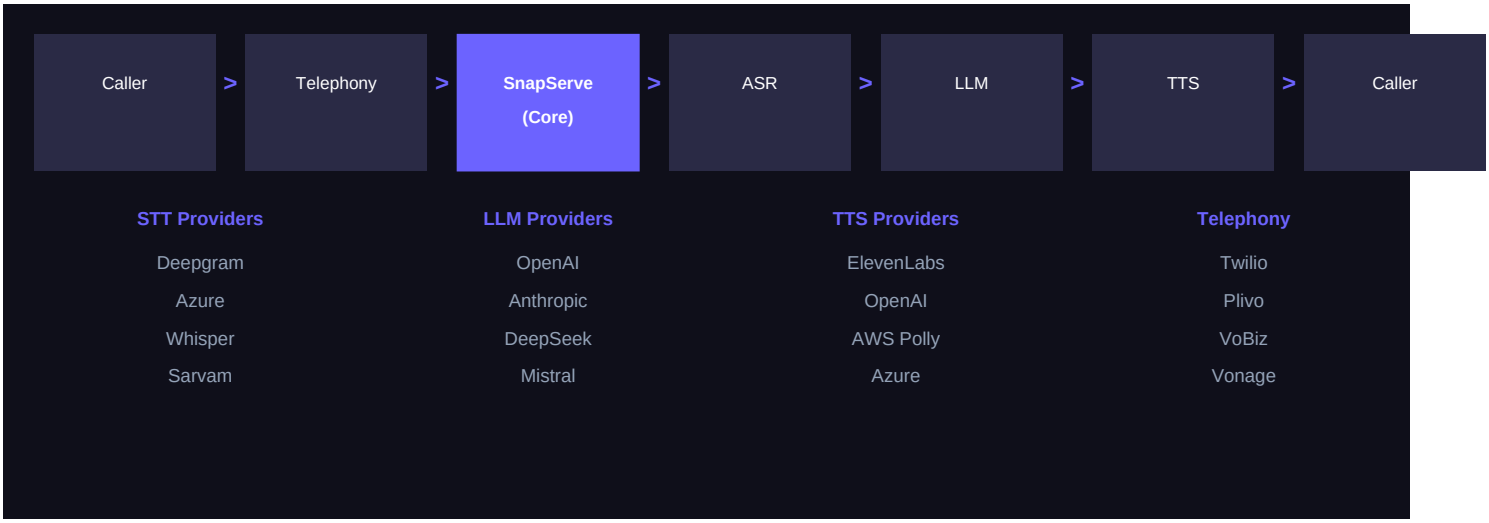
ARCHITECTURE

How It Works

Every call flows through SnapServe's orchestration pipeline in real time - from the first ring to the final goodbye.



1

Call Arrives

A caller dials in (or your campaign dials out). The telephony provider routes the call to SnapServe and opens a real-time audio stream.

2

Speech is Transcribed

The caller's voice is streamed to the ASR provider. Transcription is returned in under 500 ms with full support for Indic and multilingual speech.

3

AI Generates a Response

The transcript is sent to the LLM with your agent's persona, system prompt, caller memory and any business tools. The AI decides what to say or what action to take.

4

Voice is Synthesised

The AI response is converted to natural-sounding speech and streamed back to the caller in real time. Barge-in detection lets callers interrupt naturally.

5

Memory & Analytics Updated

After the call, SnapServe summarises the conversation, updates the caller's memory profile, logs outcomes and triggers configured webhooks or CRM updates.

APPLICATIONS

Who Uses SnapServe?

From financial services to healthcare, SnapServe powers voice agents across every industry that needs to talk to customers at scale.

BFSI

Banking & Finance

Loan follow-up, EMI reminders, KYC collection, balance enquiry, payment confirmations.

HLTH

Healthcare

Appointment booking, prescription reminders, lab result notifications, patient follow-up calls.

ECOM

E-Commerce

Order status, delivery confirmations, return initiations, post-purchase satisfaction calls.

REAL

Real Estate

Lead qualification, site visit scheduling, property inquiry handling, follow-up automation.

TELCO

Telecom & Utilities

Outage notifications, bill reminders, service renewal calls, complaint triage.

EDTCH

EdTech

Admission follow-up, class reminders, parent communication, student support lines.

AUTO

Automotive

Test drive scheduling, service reminders, lead follow-up from dealership inquiries.

INSUR

Insurance

Policy renewal reminders, claim updates, premium collection, customer onboarding calls.

SALES

Sales & Collections

Outbound campaign dialing, lead scoring by outcome, warm transfer to human agents.

Built for Multilingual India

SnapServe is purpose-built for the Indian market. Your agents can speak and understand Hindi, Tamil, Telugu, Malayalam, Kannada, Marathi, Bengali and English - switching languages mid-call based on caller preference.

Hindi | Tamil | Telugu | Malayalam | Kannada | English | + more

PRICING

Simple, Transparent Pricing

Two plans. No hidden fees. No per-seat charges. Pay only for what your agents actually use.

MANAGED PLAN

$0.05

per minute - all-inclusive

We supply all AI provider keys - ASR, LLM and TTS. You just configure your agents and go live. Zero friction.

- v All AI providers included
- v No API keys to manage
- v Instant activation
- v Full platform features
- v Caller memory & analytics
- v Scheduling & campaigns
- v $5 free credits on sign-up

MOST POPULAR

BYOP PLAN

$0.035

per minute - orchestration only

Bring your own API keys. Pay SnapServe only for orchestration. Best for high-volume deployments.

- v Use your own provider keys
- v Lower per-minute cost
- v Choose any supported provider
- v Full platform features
- v Caller memory & analytics
- v Scheduling & campaigns
- v Ideal for high-volume

Which plan is right for you?

Choose Managed if...

- Just getting started
- Don't want to manage API keys
- Low to medium call volume
- Want fastest go-live

Choose BYOP if...

- High call volumes (1000+ min/day)
- Have existing provider contracts
- Want to optimise per-minute cost
- Need a specific provider voice

Free Trial: $5 of call credits (~100 minutes) on every new account. No credit card required.

Top up your wallet at any time. Cancel or change plans whenever you like.

KEY FEATURES

Everything You Need, Out of the Box

MEM

Caller Memory

Persistent facts and history per caller. Never asks the same question twice.

ANL

Analytics

Real-time call volume, success rates, duration trends and cost per call.

CMP

Campaigns

Upload a lead list, set concurrency, let your agent dial. Retry logic built-in.

WHK

Webhooks & CRM

Push call events, transcripts and outcomes to any CRM or endpoint in real time.

TRF

Warm Transfers

Agent hands off to a human with a live spoken briefing before connection.

WEB

Web Call Widget

Embed a browser-based call widget on your website - no phone number needed.
