snapserve.ai

App Launch Checklist

June 26, 2026 -- 12 sections, 80+ checks

1 . Legal & Compliance

- [ ] Register legal entity (Pvt Ltd / LLP) if not already done
- [ ] Fill in Terms of Service blanks -- entity name, address, city, DPO name
- [ ] Fill in Privacy Policy blanks -- entity name, hosting region, DPO name
- [ ] Publish ToS and Privacy Policy as live pages on snapserve.ai
- [ ] Add ToS / Privacy Policy links to sign-up page and footer
- [ ] Add I agree to Terms of Service checkbox on registration
- [ ] TRAI DLT registration -- required for commercial outbound calls in India
- [ ] Register telephony numbers as transactional or promotional on DLT
- [ ] Add AI disclosure to agent greeting template
  e.g. This is an AI assistant. This call may be recorded.
- [ ] Publish DPDP grievance officer name and contact on site

2 . Security

- [ ] Rotate ALL secrets before launch -- dev secrets must never reach production
  SESSION_SECRET, RAZORPAY keys, GROQ key, ADMIN_TOKEN
- [ ] Confirm ADMIN_TOKEN is strong (32+ random chars) and not shared
- [ ] Verify provider API keys are encrypted at rest in production DB
- [ ] Restrict /api/admin routes by IP allowlist or VPN in production
- [ ] Set rate limiting on auth endpoints (Google OAuth callback, sign-in)
- [ ] Review CORS settings -- only snapserve.ai domains whitelisted
- [ ] Confirm HTTPS everywhere -- verify SSL on custom domain after DNS switch
- [ ] Scan git history for accidental secrets before making repo public

3 . Payments & Billing

- [ ] Switch Razorpay from test mode to live mode
- [ ] Test real payment: add credits -> call fires -> wallet deducted
- [ ] Set up Razorpay webhook for payment confirmation
- [ ] Set wallet low-balance email alert threshold
- [ ] Confirm GST display on invoices if applicable
- [ ] Verify $5 welcome credit is applied correctly on first sign-up
- [ ] Set up a billing / receipts email address

4 . Telephony

- [ ] Confirm VoBiz / Twilio / Plivo account is production-credentialed (not trial)
- [ ] Test inbound call flow end-to-end on a real phone number
- [ ] Test outbound campaign call end-to-end
- [ ] Verify call recording works and audio plays back in dashboard
- [ ] Confirm all webhook URLs point to production domain, not dev URL
- [ ] Test call transfer flows if relevant to your use case

5 . AI Providers -- Managed Plan

- [ ] Set managed_qwen_key (Groq API key) in Admin -> Platform Settings
- [ ] Test full managed-plan call: greeting -> conversation -> summary -> memory
  Memory/CRM and call summaries were fixed and deployed June 26, 2026
- [ ] Verify call summary appears in Calls Log after a managed-plan call
- [ ] Verify Memory/CRM facts populate after a managed-plan call
- [ ] Set Groq spend alert so managed-plan usage costs are visible

- [ ] Decide managed plan usage cap per user (daily / monthly minutes)

6 . Database & Infrastructure

- [ ] Provision a dedicated production PostgreSQL database (not the dev DB)
- [ ] Run all Drizzle migrations on the production DB
  pnpm --filter @workspace/db run push
- [ ] Set DATABASE_URL in Railway to point to the production DB
- [ ] Enable automated daily DB backups
- [ ] Set NODE_ENV=production in Railway environment
- [ ] Set APP_DOMAIN=snapserve.ai in Railway environment
- [ ] Confirm SESSION_SECRET is a long random string in production env
- [ ] Monitor DB connection pool -- sweepAlerts timeout seen in staging logs

7 . Domain & Deployment

- [ ] Buy / configure snapserve.ai domain
- [ ] Point domain to Railway deployment
- [ ] Confirm SSL certificate is active and auto-renewing
- [ ] Set up www.snapserve.ai redirect to snapserve.ai
- [ ] Add production domain to Google OAuth allowed redirect URIs
  https://snapserve.ai/api/auth/google/callback
- [ ] Update GOOGLE_CLIENT_ID / GOOGLE_CLIENT_SECRET in Railway env
- [ ] Smoke-test Google sign-in on the live domain after DNS switch
- [ ] Set up a status page or /api/healthz endpoint
- [ ] Configure Railway crash / OOM alerts (email or Slack)

8 . Email & Notifications

- [ ] Verify BREVO_API_KEY is set in production Railway env
- [ ] Test welcome email on new sign-up
- [ ] Test scheduling confirmation email (booking flow)
- [ ] Set up no-reply@snapserve.ai as sending address
- [ ] Set SPF, DKIM, and DMARC DNS records to avoid spam filters

9 . Pre-Launch Testing

- [ ] E2E: Sign up -> add credits -> create agent -> make call -> transcript + summary
- [ ] E2E: Create campaign -> add leads -> fire batch -> results visible
- [ ] E2E: Scheduling -> event type -> booking link -> book slot -> email received
- [ ] E2E: 2 calls from same number -> facts and episodes appear in Memory/CRM
- [ ] Test dashboard on a mobile browser
- [ ] Test account deletion / data erasure flow (DPDP compliance)
- [ ] Test with an actual beta user who has never seen the product before

10 . Monitoring & Observability

- [ ] Set up error tracking -- Sentry free tier (captures unhandled exceptions)
- [ ] Set up uptime monitoring -- UptimeRobot free, pings every 5 min
- [ ] Create Railway alert for OOM / crash restarts
- [ ] Set a Groq / LLM spend alert so managed-plan costs are visible
- [ ] Set up Razorpay alert for payment failures

11 . Product & UX

- [ ] Landing / marketing page live at snapserve.ai
- [ ] Onboarding flow tested with a completely fresh account
- [ ] All empty states are helpful -- no blank white screens
- [ ] All error messages are user-friendly -- no raw stack traces shown
- [ ] Add live chat or support widget (Crisp or Intercom)
- [ ] Set up support@snapserve.ai email
- [ ] Write a 5-minute Getting Started guide or walkthrough video

12 . Beta Launch

- [ ] Define your beta cohort -- who gets access first and how many
- [ ] Prepare a known-issues list to share with beta users upfront

- [ ] Set up a feedback channel (Slack group, WhatsApp group, or Typeform)
- [ ] Set up private beta invite flow (invite-only or manual account creation)
- [ ] Brief beta users on TRAI consent requirements before they go live
- [ ] Plan weekly check-ins with beta users for the first month

Go / No-Go Gate

All must be confirmed before opening to anyone outside your team.

ToS + Privacy Policy live on snapserve.ai	☐
Real Razorpay payments working (live mode)	☐
Production DB provisioned and migrated	☐
Google OAuth working on production domain	☐
Admin panel locked down (IP restrict or VPN)	☐
At least one full call E2E tested in production	☐
Monitoring and crash alerts active	☐
Managed-plan call summary + memory verified in production	☐
