Build the Future of Voice Intelligence

Everything you need to go from zero to a live AI voice agent in under 30 minutes — and win.

What's Inside This Playbook

01 **What is SnapServe?** — Foundation & pipeline overview
02 **The Full Capability Map** — 20 platform features explained
03 **Your Toolkit** — Every provider — LLM, TTS, STT, telephony
04 **Project Ideas by Track** — 40+ ideas across 9 industries
05 **Hello World in 5 Minutes** — Your first live AI call in 3 API calls
06 **API Reference** — Key endpoints, webhook shapes, lead injection
07 **Power Features** — Memory, KB, Squads, Disposition, Multilingual
08 **Judging Criteria** — Weighted rubric — what wins
09 **Winning Strategies** — 10 hard-won tips + the winning formula
10 **Resources & Glossary** — Links, mentor desk, 17-term glossary

01 Foundation

What is SnapServe?

SnapServe is India's voice AI orchestration platform. It wires together Speech-to-Text, Large Language Models, and Text-to-Speech into real-time phone conversations — with persistent memory, multilingual support, and TRAI/DPDP compliance baked in.

< 1 second	**10+ languages**	**Cross-call**	**TRAI · DPDP**
Round-trip latency target	incl. Tamil, Hindi, Hinglish	Persistent memory layer	Compliance built in

02 Platform

The Full Capability Map

- **Outbound Calls** — Trigger real calls via API — single or bulk campaigns
- **Inbound Calls** — Assign a phone number; callers answered live by agent
- **Persistent Memory** — Agent remembers name, prefs, past issues — forever
- **Knowledge Base** — Upload PDFs/sites; agent uses RAG to answer grounded Qs
- **In-call Booking** — Books/reschedules appointments on Google Calendar live
- **Multi-agent Squads** — Supervisor routes to specialist agents mid-call
- **Campaign Engine** — CSV or webhook !' auto-dials list with retry logic
- **Website Leads** — Embed snippet; form submissions trigger instant calls
- **WhatsApp** — Two-way messaging wired to the same agent logic
- **Disposition Engine** — Auto-categorize every call with custom taxonomy
- **Google Sheets Sync** — Pull leads from Sheets; write outcomes back automatically
- **Voice Cloning** — Cloned voice (Cartesia/ElevenLabs) for branded sound
- **Custom Webhook Tools** — Agent calls YOUR APIs mid-conversation for live data
- **Real-time Events** — call.started / call.completed webhooks with transcripts
- **Multilingual** — Tamil, Hindi, Kannada, Hinglish, Telugu + 5 more
- **Gemini Live** — Native realtime audio — zero STT/TTS round-trip
- **Browser Webcall** — Test agents in-browser, no phone needed
- **SMS Tool** — Agent sends follow-up SMS mid-call
- **DPDP / TRAI** — Consent recording, DNC, calling-hours enforcement
- **Usage Analytics** — Per-call STT/LLM/TTS latency breakdown + full transcripts

03 Access

Your Toolkit

Every tool, provider, and access pattern available to participants.

REST API

- Base URL: https://api.snapserve.ai/api
- Auth: Authorization: Bearer sk_live_YOUR_KEY
- Full CRUD on agents, calls, campaigns, KB, squads
- Webhook events with HMAC-SHA256 signatures (X-SnapServe-Signature)

LLM Providers (Managed — no own key needed)

- Groq: llama-3.3-70b-versatile, llama-3.1-8b-instant, qwen-2.5-32b !• fastest TTFT
- OpenAI: gpt-4.1, gpt-4.1-mini !• best reasoning + tool use
- Anthropic: claude-3-5-sonnet-20241022, claude-opus-4-5 !• best instruction following
- Google: gemini-2.0-flash-exp, Gemini Live gemini-3.1-flash-live-preview !• native audio
- Sarvam: sarvam-30b, sarvam-105b !• native Indic language reasoning
- Krutrim: gpt-oss-20b (India-hosted) | DeepSeek: deepseek-chat

Voice Stack (TTS)

- Cartesia: ultra-low latency English, voice cloning
- Sarvam Bulbul v3: 38 Indian voices — Hindi, Tamil, Kannada, Marathi, Telugu…
- ElevenLabs: highest quality, broadcast-grade naturalness, voice cloning
- OpenAI TTS: alloy, ash, coral, echo, fable, nova, onyx, sage, shimmer
- Azure Neural: en-US-AriaNeural + many Indian English variants
- Gemini Live: 24 preset voices (Kore, Aoede, Fenrir, Puck, Charon…)

Speech-to-Text (STT)

- Deepgram Nova-2: English streaming — recommended default
- Sarvam Saaras v3: best Indian language STT (Tamil, Hindi, Kannada…)
- Azure Cognitive: streaming + continuous language ID (LID)
- AssemblyAI: best/nano batch models
- Google Speech v1: REST batch

Telephony

- VoBiz: Indian numbers — primary for India calls
- Twilio: global coverage — ideal for testing and international
- Plivo: cost-optimised for high-volume campaigns

Provider Selection Guide

Layer	Provider	Best For	Notes
STT	Deepgram Nova-2	English, low latency	Streaming, recommended default
STT	Sarvam Saaras v3	Indian languages	Tamil, Hindi, Kannada, Marathi…
STT	Azure Cognitive	Multi-language + LID	Live language detection mid-call
LLM	Groq Llama 3.3 70B	Fastest responses	Best TTFT for real-time feel
LLM	OpenAI GPT-4.1	Complex reasoning	Tool use, structured outputs
LLM	Claude 3.5 Sonnet	Long context, safety	Best at following instructions
LLM	Gemini Live	Native realtime audio	No STT/TTS round-trip at all
LLM	Sarvam 30B/105B	Indic languages	Native Hindi/Tamil reasoning
TTS	Cartesia	Ultra-low latency	Best for English, voice cloning
TTS	Sarvam Bulbul v3	Indian voices	38 voices: Hindi, Tamil, Kannada…
TTS	ElevenLabs	Highest quality	Broadcast-grade + voice cloning
Tel.	VoBiz	Indian numbers	Primary for India calls
Tel.	Twilio	Global / testing	Widest coverage

04 Inspiration

Project Ideas by Track

Difficulty: '& Starter = build in 1-2 hours '& Intermediate = 3-5 hours '& Advanced = full day

Ø<ßå Healthcare & Wellness

Medicine Reminder Bot

Calls patients daily at their preferred time. "Did you take your morning insulin?" Remembers adherence history. Escalates to family after 2 missed days.

Persistent memory | Campaign scheduling | Transfer tool

Post-discharge Follow-up

Hospitals upload discharge CSV. Agent calls each patient Day 1, 3, 7. Asks PROMIS-5 questions. Flags abnormal responses via webhook to nursing dashboard.

CSV campaigns | Disposition engine | Outbound webhooks

Mental Health Check-in

Weekly scheduled calls in the patient's native language. Tracks PHQ-2 score over time using persistent memory. Routes to crisis line if score crosses threshold.

Memory | Multilingual | Squad handoff

Chronic Disease Daily Tracker

BP/sugar logging via voice. Agent collects readings, logs to Google Sheets, uses KB with medical guidelines to give personalised advice. Alerts doctor webhook on danger values.

Knowledge Base | Google Sheets | Custom webhook tool

Ø<ßæ BFSI — Banking, Finance & Insurance

EMI Payment Reminder

Calls borrowers 3 days before due date, 1 day before, and on the day. Uses persistent memory to personalise: "Hi Priya, your ¹12,400 EMI is due tomorrow." Skips if already paid.

Campaign with retry | Memory | Webhook tool

Insurance Renewal Agent

Calls policyholders 30 days before expiry. KB loaded with policy details. Agent answers premium questions, books callback for underwriter, or takes soft commitment.

Knowledge Base | Scheduling | Google Sheets

Loan Pre-qualification

Website form triggers instant call within 60 seconds of inquiry. Agent collects income, employment, loan purpose. Scores lead via webhook to credit engine. Routes hot leads to RM.

From Website (instant) | Webhook tool | Transfer

Voice KYC Assistant

Guides customer through KYC script in their language. Collects Aadhaar, PAN verbally. Webhook calls KYC provider API for liveness. Writes verified/failed outcome to admin dashboard.

Multilingual | Custom tools | Webhook tool

Ø=ÞÒ E-commerce & Retail

Delivery Confirmation + Rescheduling

Calls customer when order is out for delivery. "Your Myntra order arrives in 2 hours — will you be home?" If no, books a redelivery slot via in-call booking tool.

Outbound call | Native booking

Cart Abandonment Rescue

Website embed triggers instant call within 30 min of cart abandonment. Agent asks why they didn't complete. Offers discount code. Posts outcome to CRM webhook.

From Website | Instant trigger | Webhook tool

Post-delivery NPS Collector

Campaign fires 48h after delivery scan. Agent collects star rating + open feedback in any language. Disposition engine auto-routes 1-2 stars to escalation queue, 4-5 to review-request SMS.

Campaign | Multilingual | Disposition

Returns Concierge

Inbound number on returns page. Agent confirms order, explains return policy from KB, schedules pickup slot, triggers reverse-logistics webhook. Zero human touch.

Inbound | Knowledge Base | Booking | Webhook

Ø<ÍëÖ Education & Ed-Tech

Fee Payment Reminder

Monthly campaign to parents. Agent greets by student name (from CSV), states balance, offers payment link via SMS. Logs paid/deferred to Sheets.

CSV campaign | Send SMS tool | Sheets

Student Retention Bot

Identifies students who haven't logged in for 7 days (webhook from LMS). Calls them. Agent empathetically asks about blockers. Offers to schedule a mentoring session.

Webhook trigger | Booking | Disposition

Parent-Teacher Coordinator

Squad of 3: Scheduler books PTM slots, Reminder calls 24h before, Feedback agent calls after PTM. All share memory about the parent, teacher, and student across interactions.

Squad | Scheduling | Memory | Multi-agent

Ø<ßà Real Estate

Property Inquiry Qualifier

Website lead form triggers instant call. Agent asks budget, location, BHK preference. Logs qualified leads to Sheets, transfers hot leads to sales agent.

From Website | Instant call | Transfer | Sheets

Site Visit Scheduler

Nurture campaign for cold leads. Agent reactivates interest, handles objections using KB (locality, amenities, pricing FAQs), books site visit on builder calendar.

Campaign | Knowledge Base | Native booking

Builder Launch Outreach

New project launch: blast campaign to prospect list. Agent delivers personalised pitch. Handles 5 common objections (from KB). Books callbacks or site visits.

Campaign | KB | Booking | Disposition

Ø>ÝÑ HR & Recruitment

Interview Scheduler

ATS webhook triggers call to shortlisted candidate. Agent confirms interest, asks availability, books interview slot on company calendar. Logs confirmation to ATS webhook.

Webhook trigger | Booking | Outbound webhook

AI Screening Agent

Agent conducts 5-min screening: asks about experience, notice period, CTC expectations, role fit. Disposition engine scores the call. Exports to Sheets.

Knowledge Base | Disposition | Sheets

Squad: End-to-End Hiring

Squad of 3: Sourcing agent qualifies. Scheduling agent books interviews. Offer agent handles negotiations. All share memory about the candidate.

Squad | Memory | Multi-agent | Booking

Ø<ßÌ Hospitality & Events

Reservation Reminder

Restaurant campaign: calls guests 2h before reservation. Confirms headcount, notes allergies, offers early arrival. Logs no-shows for table release.

Campaign | Memory | Disposition

Post-stay Feedback

Hotel checkout triggers campaign. Agent collects NPS + open-ended feedback. Disposition routes bad experiences to GM, good ones to review request SMS.

Campaign | Multilingual | Send SMS

Event RSVP + Logistics

Calls invitees. Collects attendance, meal preference, travel mode. Answers event FAQ (from KB). Sends confirmation SMS. Logs full roster to Sheets.

Campaign | KB | SMS | Sheets

&¡ Developer / API Track

Voice-Activated CRM

"Tell me Priya's last 3 interactions." Agent fetches via webhook tool, speaks the answer, lets you dictate a new note — all by phone.

Inbound | Webhook tool | Memory

Voice Analytics Dashboard

Pull call transcripts and latency data from the API. Build a dashboard with sentiment trends, topic clustering, average handle time, and disposition breakdown.

Calls API | Disposition API | Data viz

Multilingual IVR Replacement

Replace "Press 1 for Hindi" with natural language. Caller states issue; language detection + intent routing sends them to the right specialist agent in their tongue.

Inbound | Multilingual | Squad handoff

WhatsApp !' Voice Bridge

User types query on WhatsApp; if complex, agent offers a voice callback. Click-to-call triggers an outbound call, answers the question, posts summary back to WhatsApp.

WhatsApp | Outbound call | Memory | Webhook

Ø<ß1 Social Impact / Gov-Tech

Scheme Awareness Campaign

Calls beneficiary list, explains eligibility in their regional language, answers FAQ from KB, books enrollment appointment.

CSV campaign | Multilingual | KB | Booking

Farmer Advisory Helpline

Inbound number for farmers. Agent answers crop, weather, and market price questions from KB. Remembers each farmer's crops and location. Follows up with advisory calls.

Inbound KB Memory Multilingual

Emergency Contact Blast

Upload residents in disaster zone. Campaign calls all within minutes. Agent confirms safety status, collects location of stranded residents, logs to Sheets.

Campaign Sheets Instant trigger

Hello World in 5 Minutes

Make your first live AI phone call with three API calls.

Step 1 — Create your Agent

Define who the agent is, what language it speaks, and which providers to use.

```
curl -X POST https://api.snapserve.ai/api/agents \
  -H "Authorization: Bearer sk_live_YOUR_API_KEY" \
  -H "Content-Type: application/json" \
  -d '{
    "name": "Priya - Appointment Agent",
    "systemPrompt": "You are Priya, a warm appointment coordinator for City Clinic.",
    "greetingMessage": "Namaste! Main Priya bol rahi hoon. Kya appointment book karein?",
    "llmProvider": "groq",
    "llmModel": "llama-3.3-70b-versatile",
    "ttsProvider": "sarvam",
    "asrProvider": "sarvam",
    "asrLanguage": "hi-IN",
    "tools": [{"type": "native_booking"}, {"type": "end_call"}]
  }'
```

Step 2 — Make the Call

Trigger a live outbound call using the agentId from Step 1.

```
curl -X POST https://api.snapserve.ai/api/calls/outbound \
  -H "Authorization: Bearer sk_live_YOUR_API_KEY" \
  -H "Content-Type: application/json" \
  -d '{"agentId": 42, "toNumber": "+919876543210"}'

# Response: { "id": 1001, "status": "ringing", "toNumber": "+919876543210" }
```

Step 3 — Receive the Transcript

Set a webhookUrl on your agent. SnapServe POSTs this when the call ends.

```
// Payload at your webhook endpoint:
{
  "event": "call.completed",
  "timestamp": "2026-07-26T10:30:00Z",
  "data": {
    "id": 1001,
    "status": "booked",
    "durationSeconds": 87,
    "transcript": "Agent: Namaste! Main Priya...\nCaller: Haan, book karo...",
    "agentName": "Priya - Appointment Agent"
  }
}
```

Or — Use the Dashboard (Zero Code)

1. Login !’ Agents !’ + New Agent
2. Pick LLM provider + TTS provider + language
3. Write a system prompt describing the agent's goal
4. Click "Test in Browser" (Webcall — no phone needed)
5. Talk to your agent and iterate on the prompt
6. Promote to production and attach a real phone number

API Reference

All routes under https://api.snapserve.ai/api | Auth: Authorization: Bearer sk_live_…

Method	Endpoint	What it does	Key params
POST	/agents	Create a voice agent	name, systemPrompt, llmProvider, tools[]
PATCH	/agents/:id	Update agent config	Any field; partial update OK
POST	/calls/outbound	Trigger one outbound call	agentId, toNumber
GET	/calls/:id	Get call + transcript	Returns status, transcript, recording
PATCH	/calls/:id/end	Forcefully end a live call	—
POST	/campaigns	Create a campaign	agentId, leadSource, triggerMode
POST	/campaigns/:id/import-leads	Upload leads CSV or JSON	Multipart CSV or JSON array
POST	/{webhookToken}/lead	Inject a lead via webhook URL	phone + any extra fields
GET	/campaigns/:id/leads	List all leads + status	Pagination: page, limit
GET	/agents/:id/memory/facts	Get caller memory	phoneNumber query param
GET	/wallet	Check credit balance	Returns balanceCents
POST	/knowledge-sources	Add KB entry (text/URL/FAQ)	type, title, content or url
POST	/knowledge-sources/upload	Upload PDF/DOCX to KB	Multipart file
POST	/squads	Create a multi-agent squad	name, members[], supervisorAgentId
POST	/squads/:id/runs	Run a squad on a task	kind, goal, agentId or toNumber

Webhook Lead Injection — Instant Calls from Any Source

Every campaign has a unique token URL. POST JSON to it and the agent calls the number within seconds. All extra fields are automatically injected into the agent's system prompt as a LEAD CONTEXT block.

```
POST https://api.snapserve.ai/api/webhooks/campaign/{webhookToken}/lead

{
  "phone": "+919876543210",
  "name": "Ramesh Kumar",
  "loan_amount": "250000",
  "city": "Chennai",
  "product_interest": "Home Loan"
}

# All extra fields appear in the agent prompt as:
# === LEAD CONTEXT ===
# name: Ramesh Kumar  |  loan_amount: 250000  |  city: Chennai
```

Outgoing Webhook Events (set webhookUrl on your agent)

`call.started`
Call answered by recipient

`call.failed`
No pickup, busy, or provider error

`scheduling.booking.cancelled`
Appointment cancelled

`scheduling.booking.created`
Appointment booked during the call

`scheduling.booking.rescheduled`
Appointment moved to new slot

07 Advanced

Power Features

Use these to go from "demo" to "production-grade" — and from shortlisted to winner.

Ø>ÝÀ Persistent Cross-call Memory

Every call, the agent extracts key facts about the caller (name, preferences, past issues, context) and stores them. On the NEXT call to the same number, those facts are automatically injected into the prompt. The agent picks up exactly where it left off.

```
GET /api/agents/42/memory/facts?phoneNumber=%2B919876543210
# Returns: [{ key: "name", value: "Priya" }, { key: "issue", value: "billing" }]
```

Ø=ÜÚ Knowledge Base (RAG)

Upload PDFs, Word docs, CSVs, or paste text. Crawl a website URL. Everything is chunked, embedded into pgvector, and retrieved per-turn. Agent answers with grounded facts instead of hallucinating.

```
POST /api/knowledge-sources/upload
# multipart: file=@policy_document.pdf, agentId=42, title="Motor Policy 2026"
```

Ø=ÜÅ In-call Appointment Booking

Give your agent the native_booking tool. Mid-conversation, it checks real availability, offers slots, and confirms a booking — all without the caller ever leaving the call. Works with Google Calendar.

```
// Add to agent.tools:
{ "type": "native_booking", "eventTypeId": 7 }
// Agent: "I have slots at 3pm and 5pm — which works for you?"
```

Ø>Ý Multi-agent Squads

Build teams of specialist agents. A supervisor routes. A technical specialist handles Tier-1. A billing specialist handles payments. Handoffs happen live mid-call or as follow-up calls. All share squad context.

```
POST /api/squads
{ "name": "Clinic Squad", "members": [
  { "agentId": 10, "roleName": "Receptionist", "handoffEnabled": true },
  { "agentId": 11, "roleName": "Doctor Follow-up" }] }
```

Ø=Ý Custom Webhook Tools

Give the agent the ability to call YOUR APIs mid-conversation. Fetch account balance, check inventory, submit a form, update a CRM record. The agent sees the response and speaks it naturally.

```
// Add to agent.tools:
{ "type": "webhook", "name": "check_balance",
  "url": "https://yourapi.com/balance", "method": "POST",
  "parameters": { "phone": { "type": "string" } } }
```

Ø=ÜÊ Disposition Engine

After every call, an LLM analyzes the transcript against YOUR custom taxonomy. Define outcomes like: Hot Lead / Warm Lead / Not Interested / Callback. Each call gets auto-labeled with a confidence score.

```
// Configure on agent:
"dispositionConfig": { "taxonomy": {
  "primary": ["hot_lead","warm_lead","cold_lead","callback"],
  "sub": ["pricing_objection","competitor_mentioned"] } }
```

Ø<ß Multilingual + Language Switching

Set asrLanguage to any Indian language. Azure STT supports continuous LID — caller can switch from English to Tamil mid-sentence and the agent follows. Sarvam Bulbul v3 has 38 Indian voices.

```
"asrProvider": "azure", "asrLanguage": "ta-IN",
"asrSecondaryLanguage": "en-IN",
"ttsProvider": "sarvam", "ttsVoice": "priya"  // Tamil female
```

&¡ Gemini Live (Zero-latency)

Select Gemini Live as your model. Audio goes directly to Gemini — no STT!'LLM!'TTS round-trip. The agent responds in under 300ms. Best for demos, real-time assistants, and where speed is the feature.

```
"llmProvider": "google",
"llmModel": "gemini-3.1-flash-live-preview",
"voiceStack": "gemini_live",
"geminiLiveVoiceName": "Kore"  // 24 preset voices available
```

08 Competition

Judging Criteria

Ø<ß¯ Problem Fit

Is this a REAL problem that REAL people have? Is the voice modality the right medium — not just a gimmick? Does the agent solve it better than non-voice alternatives?

- Pick a pain point you or someone you know actually feels
- Quantify the problem: "X crore people face Y, costing Z per month"
- Voice must be the natural interface — not a chatbot with speech bolted on

&™Ì echnical Depth

How well did you use the platform? Did you go beyond the basics? Multi-feature integrations beat single-endpoint demos every time.

- Use at least 3 platform capabilities
- Persistent memory + KB + a custom tool = strong signal
- Squads or Disposition engine shows advanced thinking

Ø=ÝõÞ onversation Quality

Is the agent pleasant to talk to? Does it sound natural, stay on task, handle edge cases gracefully, and avoid hallucination?

- Write a detailed system prompt — every sentence matters
- Load your KB with real domain knowledge, not placeholder text
- Test with Webcall 20+ times before your demo

Ø=Ìÿ emo Impact

Did the live demo work? Was it impressive? Did it make judges want to use it? Demos that work are rare — be the team that has one.

- Do a live call in the room if you can
- Have a fallback recording in case of network issues
- Show the transcript + disposition + booking confirmation in real time

Ø=ÜÈ Market Potential

Is there a real business here? Who pays, how much, and why now?

- One slide on TAM / ICP / monetisation is enough
- India's BPO sector is ¹3L Cr — pick your slice

09 Strategy

Winning Strategies

The Winning Formula

Real pain + multilingual voice + persistent memory + live data integration + working demo = hard to beat.

Pick one workflow, make it work end-to-end, and show what happens from "call starts" to "outcome in the database."

Resources & Support

Quick Links

- Dashboard (no-code builder): app.snapserve.ai
- API Docs (in-app): Agents !' API Reference !' Try it out
- Sarvam voice preview: sarvam.ai/voices (38 Indian voices)
- Cartesia voice library: cartesia.ai/voices
- Webcall tester (browser, no phone): app.snapserve.ai/vibe
- Mentor desk: Ask a SnapServe engineer at the hackathon venue

Glossary

Term	Definition
Agent	Your AI voice persona. Has a system prompt, voice, and tools.
Campaign	A batch of leads the agent dials automatically. CSV or webhook-driven.
Lead	A phone number (+ metadata) inside a campaign. Can be retried.
System Prompt	The instructions that define the agent's personality, goals, and constraints.
Greeting Message	The first sentence the agent says when the call connects.
KB (Knowledge Base)	Documents/URLs the agent retrieves from during the conversation.
Disposition	Auto-classification of a call's outcome using a custom taxonomy.
Squad	A team of agents with handoff and follow-up capabilities.
Webhook Tool	Lets the agent call your external API mid-conversation.
Persistent Memory	Facts extracted per caller, injected back on the next call.
triggerMode: instant	Campaign that calls within seconds of a new lead arriving.
triggerMode: batch	Campaign that dials all leads at a scheduled time.
Webcall	Browser-based call tester — no phone needed.
Vibe	Speed-testing interface: swap voices and LLMs, test instantly.
BYOP	Bring Your Own Providers — supply your own AI API keys.
DPDP	India's Digital Personal Data Protection Act. Consent controls built in.
TRAI	Telecom Regulatory Authority of India. Calling-hours rules enforced.
