SnapServe

LIVE WEBINAR COMPANION · 23 AUGUST 2026

Voice agents, from zero to a working phone.

Building a production-ready voice agent should not be complicated. You do not need prior SnapServe experience. If you have never built one, this sheet is for you.

THE HOUR

30 min
Live build
We design a conversation, add rules, test the agent, and put it on a phone.

15 min
What's next
What we are building so agents are easier to ship and scale.

15 min
Open Q&A
Prompts, voice, numbers, languages, pricing, going live.

BY THE END OF THIS HOUR YOU CAN

Explain it
Say what a voice agent is, and what it is not, in plain language.

Write the job
One sentence: who it talks to, what it does, what success is.

Build the first one
Follow the six steps we run live, then repeat after the session.

For founders, developers, students, and product teams. Bring a use case or just an idea.

START HERE

What is a voice agent?

A voice agent is software that can take a real phone call. It listens, understands, speaks back, and can finish a small job while it talks.

NOT THIS

A robot menu

"Press 1 for sales. Press 2 for support." The caller does all the work.

NOT THIS

Only a chat box

A website bot that types. Useful, but it is not a phone conversation.

THIS

A trained teammate on the phone

The caller talks in normal language. The agent answers, asks one question at a time, and follows the rules you wrote. It never sleeps, and it can take many calls at once.

A simple picture

A parent calls a clinic: "Do you have a slot tomorrow evening?"

1. Hear

The agent catches the words, even if the line is a little noisy.

2. Decide

It checks your hours and what you allow it to book.

3. Act

It books or offers a time, then can send WhatsApp after the call.

Good first jobs

- Book or confirm an appointment
- Answer fees, hours, and location
- Follow up a lead: interested or not
- Collect name, city, and a callback time

Leave these to a person

- Angry or upset callers
- Odd complaints you have not written down
- Promises you have not approved
- Anything that needs a human yes

THE ONLY DIAGRAM YOU NEED

How a phone call actually works

Five parts. Remember these and the rest of the hour will click.

1	2 LISTEN	3 THINK	4 SPEAK	5 DO
Number	**Speech to text**	**The brain**	**Text to speech**	**Actions**
They dial you, or SnapServe dials them. It is a real phone number.	Their voice becomes words. People call this STT.	Your instructions plus their words. Decides the next sentence. People call this the LLM.	Those words become a natural voice. People call this TTS.	WhatsApp, a sheet, a CRM, or a label when the call ends.

The caller only hears a conversation

You design the job behind it. If the reply feels slow, that wait is called **latency**. Shorter feels more human. If the voice sounds off, that is usually the speaking step, not the thinking step.

Business logic, in plain English

These are the rules the agent must not break. Write them before you worry about the voice.

Never promise a price or discount you did not write down.

Ask one question at a time. Confirm name, city, or time before you close.

If they say they are not interested, thank them and end politely. Do not push.

Send outcome WhatsApp **after** the call, when you know Interested vs Not interested. During the call you are still guessing.

DO THIS ON PAPER FIRST

Design the conversation

The live build goes faster if you already know the job. One sentence is enough to start.

WRITE THIS NOW

This agent [does what] for [whom] so that [result].

This agent follows up loan leads for first-time callers so interested people get a callback today.

Four beats of almost every call

1. **Hello**
   Who you are. Why you called, or how you can help.
2. **Listen**
   One question at a time. Do not dump a list.
3. **Confirm**
   Repeat the facts that matter: name, time, city.
4. **Close**
   What happens next. Then a short goodbye.

TOO MUCH

"Hi I am an advanced AI solution from our omnichannel stack here to digitally transform your enquiry journey."

BETTER

"Hi, I am Aarthi from Green Valley Clinic. I can help you book a visit. Is now a good time?"

Pick a tiny use case for today

IF YOU ARE	TRY THIS JOB
Founder / sales	Follow up a lead. Ask if they want a demo this week.
Student	Campus enquiry. Collect course and city.
Product / ops	Appointment reminder. Confirm or reschedule.
Support / clinic	Hours, price, location. Hand off if stuck.

THE LIVE 30 MINUTES

Build it on SnapServe

We will do this together. You can repeat the same six steps after the session at app.snapserve.ai.

1. **Create the agent**
   Give it a name, a language, and a voice. This is the teammate, not the whole company.

2. **Write the conversation**
   Paste the one-sentence job and the four beats. Say what success sounds like.

3. **Add business logic**
   What to collect. What never to say. When to end. When to mark Interested or Not interested.

4. **Test in the browser**
   Talk to it before it touches a phone. Fix the greeting and the close here. It is free to be messy.

5. **Put it on a number**
   Inbound: they call you. Outbound: you call them. Same agent. Different direction.

6. **Improve from one real call**
   Listen once. Change one instruction. Test again. That loop is the whole craft.

AFTER THE CALL

Outcome messages

When the call ends you know the result. Map Interested to one WhatsApp template, Not interested to another. Leave mid-call send off unless the person asks for something during the call.

REST OF THE HOUR

15 + 15

What is next — easier build, deploy, and scale.
Open Q&A — prompts, voice quality, numbers, languages, WhatsApp, latency, pricing, going live.

TAKE THIS HOME

Words you will hear today

Nobody expects you to know these already. Use this page in the Q&A.

Voice agent	Software that can hold a phone conversation and finish a small job.
Prompt	The written job for the agent. Your one sentence plus rules.
STT / TTS	Listening (speech to text) and speaking (text to speech).
LLM	The model that chooses the next sentence from your rules and their words.
Latency	How long until the agent replies. Shorter feels more human.
Disposition	The label at the end: Interested, Not interested, Callback, Wrong number.
Campaign	Calling many people from a list, with retry rules.
Knowledge base	Files the agent can look up: fees, hours, FAQs.

Ask us anything

Prompts · Voice quality · Indian languages · Phone numbers · WhatsApp · Sheets · CRM · Latency · Pricing · How to go live this week

What you leave with

A clear picture of a voice agent. A one-sentence job. Six steps from idea to a number that rings. Live answers to your questions.

AFTER THE SESSION

1. Open **app.snapserve.ai**
2. Create one agent for the sentence you wrote on page 4
3. Test in the browser. Only then attach a phone number

Indic-first voice agents. Free to start. Bring the idea you explored today.
