ENTERPRISE AI VOICE AGENTS

# Your Business, Speaking Smarter.

SnapServe is an AI voice agent orchestration platform that lets you deploy intelligent, multilingual voice agents in minutes - no engineering team required.

- Auto-Dial Campaigns
- Outbound + Caller Memory
- Custom SnapServe Voices
- Multilingual STT
- Any Telephony
- Smart Scheduling

| $0.05 / min | Auto-Dial | 10+ | 4+ |
|---|---|---|---|
| Fully Managed Plan | Outbound Campaigns | AI Providers Supported | Telephony Providers |

**EXCLUSIVE: SnapServe Custom Voices**

Proprietary AI voices trained for Indian accents - not available on any other platform.

PLATFORM FEATURES

# What SnapServe Delivers

Every feature listed below is built-in - not a third-party add-on. From the first dial tone to the post-call memory update, SnapServe handles the entire voice stack.

AUTO

### Auto-Dial Campaigns

Upload a lead list, set concurrency and go. SnapServe dials automatically, handles busy/no-answer, retries and tracks every outcome.

MEM

### Outbound + Caller Memory

Every outbound call is memory-aware. The agent remembers past conversations and picks up exactly where it left off on every retry.

VOICE

### SnapServe Custom Voices

Proprietary AI voices trained for Indian English and Indic languages - richer and more natural than any generic TTS. Exclusive to SnapServe.

AMD

### Voicemail / AMD Detection

Automatically detects answering machines before connecting the agent, saving minutes and improving true-answer-rate accuracy.

XFER

### Warm Transfer

Agent hands off to a human with a live spoken briefing so the operator hears full context before the caller is connected.

BARGE

### Barge-In Detection

Callers can interrupt the agent mid-sentence naturally. No awkward pauses, no waiting for the agent to finish its sentence.

GEND

### Gender Salutation

Detects caller gender in real time and auto-adjusts the Sir/Ma'am salutation from the very first greeting of the call.

KB

### Knowledge Base

Attach product manuals, FAQs, scripts or policies. The agent answers questions from your own content at call time.

SCHED

### Smart Scheduling

Built-in booking engine with Google Calendar sync, availability windows, slot locking and automatic email notifications.

CAMP

### Campaign Dashboard

Batches, concurrency control, pacing, retry logic, lead status tracking and live call-by-call reporting in one screen.

EXCLUSIVE FEATURE

# SnapServe Custom Voices - Not Available on Any Other Platform

While other platforms route calls through generic ElevenLabs or OpenAI voices shared by thousands of businesses, SnapServe offers a library of proprietary AI voices trained specifically for Indian English and Indic language callers. These voices are exclusive to the SnapServe platform and cannot be accessed anywhere else.

### Indian English Accent

Trained on native Indian English speech. Not a generic American or British voice that sounds mismatched to Indian callers.

### Indic Language Voices

Dedicated voices for Hindi, Tamil, Telugu, Malayalam and more - correct prosody, pronunciation and regional nuance built in.

### Custom Brand Voice

Commission a voice trained on your brand persona. Your AI agent sounds exactly how your brand wants - no one else has that voice.

### < 300 ms First Audio

SnapServe voices stream the first audio chunk in under 300 ms - faster than any third-party TTS integration.

### Emotion-Aware Tone

Adapts tone and pace to conversation context: warmer for greetings, clearer for confirmations, calm for objection handling.

### No Provider Lock-In Risk

SnapServe owns these voices, so there is no risk of a third-party provider changing pricing, deprecating a voice or going offline.

## How SnapServe Voices Compare

| | SnapServe | ElevenLabs | OpenAI TTS | Azure Neural |
|---|---|---|---|---|
| Indian accent quality | Excellent | Generic | Generic | Basic |
| Indic language prosody | Native | Limited | Limited | Limited |
| Custom brand voice | Yes | Paid extra | No | No |
| Exclusive to you | Yes | No | No | No |
| First chunk latency | < 300 ms | 400-600ms | 300-500ms | 400ms+ |

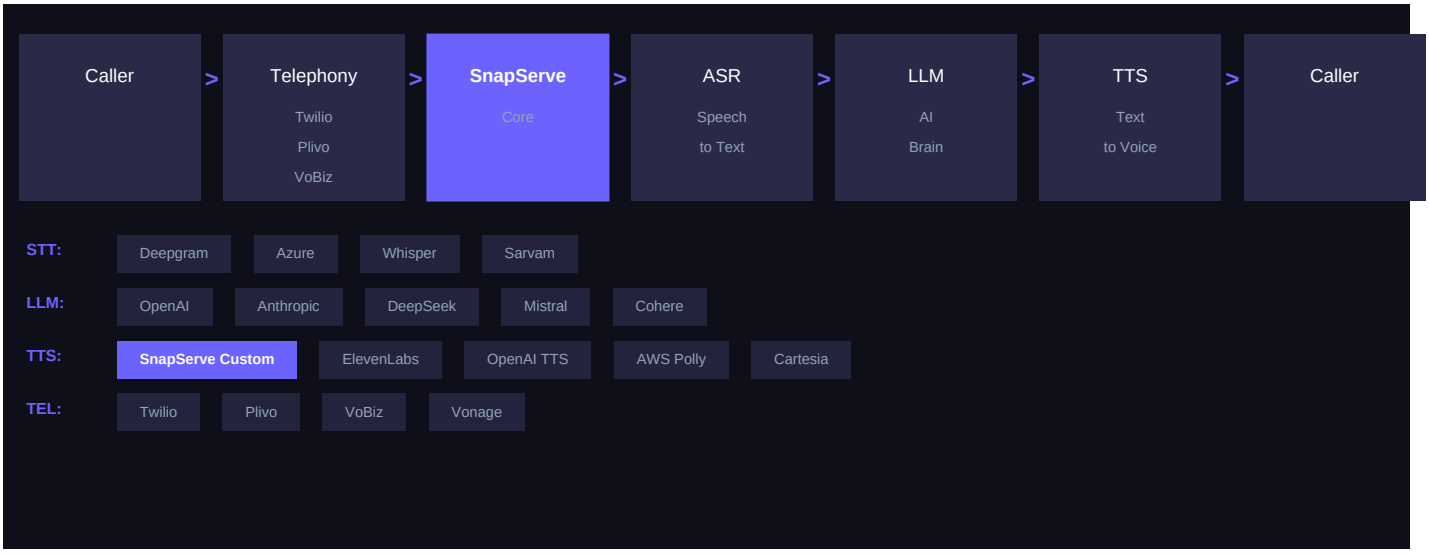
ARCHITECTURE

# How It Works

Every call flows through SnapServe's real-time orchestration pipeline - from the first ring to the post-call memory update.



### Call Arrives

Your telephony provider (Twilio / Plivo / VoBiz) receives the inbound call or triggers an outbound dial. The live audio stream is routed to SnapServe.

### AMD Check

SnapServe's Answering Machine Detection identifies voicemails and machines before connecting the agent, so you only pay for real conversations.

### Greeting + Gender Detection

The agent plays its greeting. Simultaneously, SnapServe analyses the caller's first words to detect gender and auto-personalise the Sir/Ma'am salutation.

### STT + Caller Memory Lookup

Caller speech is transcribed in real time. SnapServe retrieves the caller's history, facts and prior conversation context from Caller Memory.

### LLM Decision

Transcript, memory, system prompt and tools are sent to the LLM. The AI decides what to say, what to look up, whether to book a slot or transfer to a human.

### TTS Response

The reply is streamed to SnapServe's custom TTS engine. First audio reaches the caller in under 300 ms. Barge-in detection stays active throughout.

### Post-Call Memory Update

After the call, SnapServe summarises the conversation, updates caller facts, logs the outcome and fires configured webhooks and CRM integrations.

APPLICATIONS

# Who Uses SnapServe?

From BFSI collections to EdTech admissions, SnapServe powers voice agents across every industry that calls customers at scale.

BFSI

### Banking & Finance

Loan follow-up, EMI reminders, KYC collection, balance enquiry, payment confirmations.

HLTH

### Healthcare

Appointment booking, prescription reminders, lab result notifications, patient follow-ups.

ECOM

### E-Commerce

Order status, delivery confirmations, COD verification, return initiations, satisfaction calls.

REAL

### Real Estate

Lead qualification, site visit scheduling, NRI investor outreach, follow-up automation.

TELCO

### Telecom

Outage notifications, bill reminders, plan upgrades, service renewal, complaint triage.

EDTCH

### EdTech

Admission follow-up, class reminders, parent communication, fee collection.

AUTO

### Automotive

Test drive scheduling, service reminders, insurance renewal, post-service NPS calls.

INSUR

### Insurance

Policy renewals, claim status updates, premium collection, outbound servicing.

COLL

### Collections/Sales

Predictive dialing, lead scoring by outcome, warm transfer to human closers.

## Built for Multilingual India

SnapServe agents speak and understand Hindi, Tamil, Telugu, Malayalam, Kannada, Marathi, Bengali and Indian English - switching languages mid-call based on caller preference. SnapServe Custom Voices are trained on native Indian speech, giving your agents an accent your customers trust.

Hindi | Tamil | Telugu | Malayalam | Kannada | Marathi | Bengali | English

PRICING

# Simple, Transparent Pricing

Two plans. No hidden fees. No per-seat charges. Pay only for what your agents use.

MANAGED PLAN

## $0.05

per minute - all-inclusive

We supply all AI keys (ASR, LLM, TTS). Just configure your agents and go live. Zero friction.

- v All AI providers included
- v No API keys to manage
- v SnapServe Custom Voices
- v Auto-Dial campaigns
- v Caller memory across calls
- v Smart scheduling
- v CRM webhooks
- v $5 free credits on sign-up

BEST VALUE - MOST POPULAR

BYOP PLAN

## $0.035

per minute - orchestration only

Bring your own API keys. Pay SnapServe only for orchestration. Best for high-volume.

- v Use your own ASR/LLM/TTS keys
- v Lower per-minute cost
- v SnapServe Custom Voices available
- v Auto-Dial campaigns
- v Caller memory across calls
- v Smart scheduling
- v CRM webhooks
- v Ideal for 1000+ min/day

### Which plan is right for you?

**Choose Managed if...**

- Just getting started
- No API keys to manage
- Low-medium call volume
- Fastest go-live

**Choose BYOP if...**

- 1000+ min/day volume
- Existing provider contracts
- Cost optimisation priority
- Specific provider features

**Free Trial: $5 of call credits (~100 minutes) on every new account. No credit card required.**

Top up your wallet at any time. Cancel or change plans whenever you like.
