ENTERPRISE AI VOICE AGENTS

Your Business, Speaking Smarter.

SnapServe is an AI voice agent orchestration platform that lets you deploy intelligent, multilingual voice agents in minutes - no engineering team required.

Any Telephony s Smart Scheduling

Multilingual STT

$0.05/min	Auto-Dial	10+	4+
Fully Managed	Outbound Campaigns	AI Providers	Telephony Providers

EXCLUSIVE: SnapServe Custom Voices

Proprietary AI voices trained for Indian accents - not available on any other platform.

PLATFORM FEATURES

What SnapServe Delivers

SnapServe is a full-stack AI voice orchestration platform - from the moment the phone rings to the post-call memory update. Every feature is built-in, not bolted on.

AUTO

Auto-Dial Campaigns

Upload a lead list, set concurrency and go. SnapServe auto-dials, handles answering machines, retries failed calls and tracks every outcome.

MEM

Outbound + Caller Memory

Every outbound call is memory-aware. The agent remembers past conversations, so it picks up exactly where it left off on every retry.

VOICE

SnapServe Custom Voices

Proprietary AI voices trained for Indian English, Hindi and Indic languages - richer, more natural and not available on any other platform.

AMD

Voicemail / AMD Detection

Automatically detects answering machines and voicemails before connecting your agent, saving minutes and improving answer-rate accuracy.

XFER

Warm Transfer

Agent hands the call to a human agent with a live spoken briefing - the operator hears full context before the caller is connected.

BARGE

Barge-In Detection

Callers can interrupt the agent mid-sentence naturally. No awkward silences, no waiting for the agent to finish. Truly conversational.

GEND

Gender Detection

Detects caller gender in real time and automatically adjusts the Sir/Ma'am salutation - personalised from the very first greeting.

KB

Knowledge Base

Attach product manuals, FAQs, scripts or policies. The agent answers questions from your content using full-text search at call time.

SCHED

Smart Scheduling

Built-in booking engine: availability calendars, Google Calendar sync, slot locking and automatic email/webhook notifications.

CAMP

Campaign Management

Full campaign dashboard: batches, concurrency control, pacing, retry logic, lead status tracking and live call-by-call reporting.

EXCLUSIVE FEATURE

SnapServe Custom Voices - Not Available Anywhere Else

While other platforms route your calls through generic ElevenLabs or OpenAI TTS voices shared by thousands of businesses, SnapServe offers a library of proprietary AI voices - trained specifically for Indian English and Indic language callers. These voices are exclusive to the SnapServe platform.

Indian English Accent

Voices trained on native Indian English speech patterns - not a generic American or British voice that sounds out of place to Indian callers.

Indic Language Voices

Dedicated voices for Hindi, Tamil, Telugu, Malayalam and more - natural prosody, correct pronunciation and regional nuance built in.

Custom Brand Voice

Commission a voice trained on your brand persona. Your AI agent sounds exactly the way your brand wants to sound - no one else has that voice.

Low Latency Streaming

SnapServe voices stream the first audio chunk in under 300 ms - faster than any third-party TTS integration, keeping conversations fluid.

Emotion-Aware Tone

The voice adapts tone and pace based on conversation context - warmer for greetings, clearer for confirmations, calm for objection handling.

No Provider Lock-In Risk

Because SnapServe owns these voices, there is no risk of a third-party provider changing pricing, deprecating a voice or going offline.

How SnapServe Voices Compare

	SnapServe Voices	ElevenLabs	OpenAI TTS	Azure Neural
Indian accent quality	Excellent	Generic	Generic	Basic
Indic language prosody	Native	Limited	Limited	Limited
Custom brand voice	Yes	Paid extra	No	No
Exclusive to you	Yes	No	No	No
Latency (first chunk)	< 300 ms	400-600ms	300-500ms	400ms+

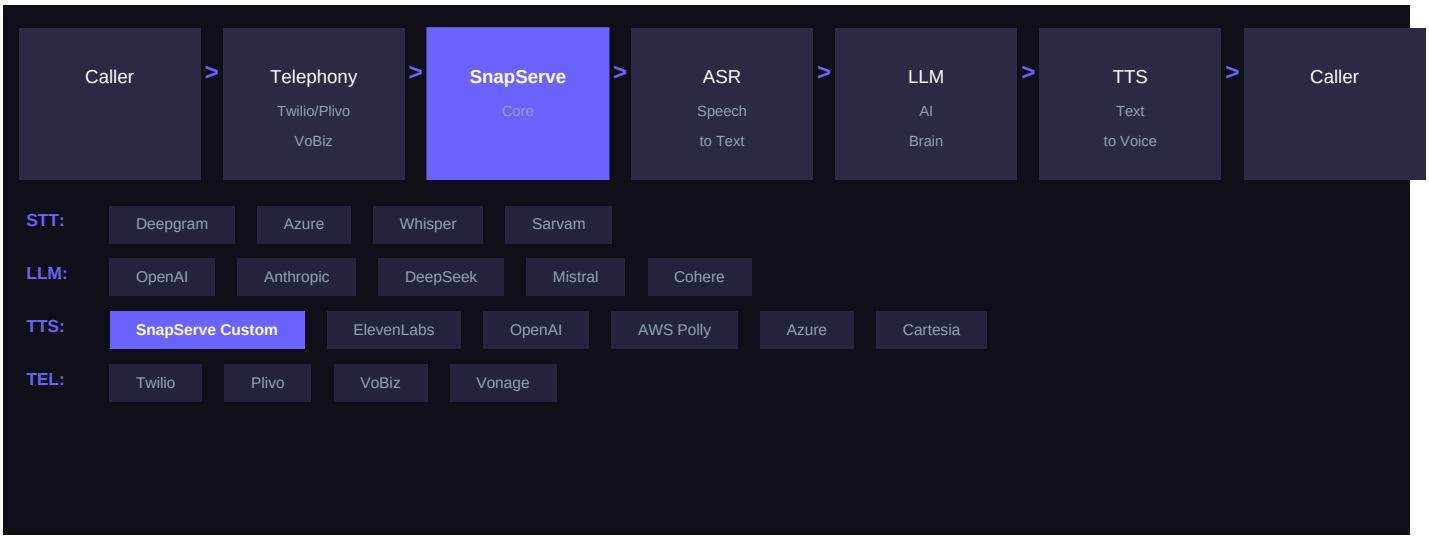
ARCHITECTURE

How It Works

Every call flows through SnapServe's real-time orchestration pipeline - from the first ring to post-call memory update.



1

Call Arrives

TCN / Twilio / Plivo dials the lead. On answer, the telephony provider routes the live call to SnapServe via webhook + WebSocket audio stream.

2

AMD Check

SnapServe's Answering Machine Detection (AMD) identifies if a voicemail or machine answered. Live-answer calls proceed; machines are handled separately.

3

Greeting + Gender Detection

The agent plays its custom greeting. Simultaneously, SnapServe analyses the caller's first words to detect gender and auto-personalise the Sir/Ma'am salutation.

4

STT + Memory Lookup

Caller speech is transcribed in real time. SnapServe looks up the caller's history, facts and prior conversation context from Caller Memory.

5

LLM Decision

The full context - transcript, memory, system prompt, tools - is sent to the LLM. The AI decides what to say, what to look up, whether to book or transfer.

6

TTS Response

The LLM reply is streamed to SnapServe's custom TTS engine. The first audio chunk reaches the caller in under 300 ms. Barge-in detection stays active throughout.

7

Post-Call Memory Update

After the call ends, SnapServe summarises the conversation, updates caller facts, logs the outcome and triggers webhooks / CRM integrations automatically.

APPLICATIONS

Who Uses SnapServe?

From BFSI collections to EdTech admissions, SnapServe powers voice agents across every industry that calls customers at scale.

BFSI

Banking & Finance

Loan follow-up, EMI reminders, KYC collection, balance enquiry, payment confirmations, fraud alerts.

HLTH

Healthcare

Appointment booking, prescription reminders, lab result notifications, discharge follow-ups, patient engagement.

ECOM

E-Commerce

Order status, delivery confirmations, return initiations, COD verification, post-purchase satisfaction calls.

REAL

Real Estate

Lead qualification, site visit scheduling, property inquiry handling, NRI investor outreach, follow-up automation.

TELCO

Telecom & Utilities

Outage notifications, bill payment reminders, plan upgrade offers, service renewal, complaint triage.

EDTCH

EdTech

Admission follow-up, class reminders, parent-teacher communication, fee collection, student support.

AUTO

Automotive

Test drive scheduling, service reminders, insurance renewal, EMI follow-up, post-service NPS calls.

INSUR

Insurance

Policy renewal reminders, claim status updates, premium collection, TATA/LIC-style outbound servicing.

COLL

Collections & Sales

Predictive outbound dialing, lead scoring by conversation outcome, hot-lead warm transfer to human closers.

Built for Multilingual India

SnapServe agents speak and understand Hindi, Tamil, Telugu, Malayalam, Kannada, Marathi, Bengali and Indian English - switching languages mid-call based on the caller's preference. The SnapServe Custom Voices are trained on native Indian speech patterns, giving your agents an accent your customers actually trust.

Hindi | Tamil | Telugu | Malayalam | Kannada | Marathi | Bengali | English

PRICING

Simple, Transparent Pricing

Two plans. No hidden fees. No per-seat charges. Pay only for what your agents actually use.

MANAGED PLAN

$0.05

per minute - all-inclusive

We supply all AI provider keys - ASR, LLM and TTS. You just configure your agents and go live.

- v All AI providers included
- v No API keys to manage
- v SnapServe Custom Voices included
- v Auto-Dial campaigns
- v Caller memory across calls
- v Smart scheduling built-in
- v $5 free credits on sign-up
- v Full analytics & CRM webhooks

MOST POPULAR - BEST VALUE

BYOP PLAN

$0.035

per minute - orchestration only

Bring your own API keys. Pay SnapServe only for orchestration. Best for high-volume deployments.

- v Your own ASR / LLM / TTS keys
- v Lower per-minute cost
- v SnapServe Custom Voices available
- v Auto-Dial campaigns
- v Caller memory across calls
- v Smart scheduling built-in
- v Full analytics & CRM webhooks
- v Ideal for 1000+ min/day

Which plan is right for you?

Choose Managed if...

- Just getting started
- Don't want to manage API keys
- Low-medium call volume
- Want fastest go-live

Choose BYOP if...

- High call volumes (1000+ min/day)
- Have existing provider contracts
- Want to optimise per-minute cost
- Need specific provider features

Free Trial: $5 of call credits (~100 minutes) on every new account. No credit card required.

Top up your wallet at any time. Cancel or change plans whenever you like.
