SnapServe

AI VOICE AGENTS

AI voice agents that remember every caller.

Every other AI calls like it's the first time. **Ours remembers.**

Chennai, India

THE PROBLEM

Customer calling in India is broken

Human call centers

- Expensive to scale, high attrition
- Agents forget context between calls
- Follow-ups missed, dropped calls never resumed
- Quality depends on which human picks up

Today's AI voice agents

- Stateless — every call starts from zero
- Weak on Indian languages and accents
- US-hosted latency kills conversation flow
- No IRDAI/TRAI/DPDP compliance built in

THE SOLUTION

SnapServe: voice AI with a memory

Persistent cross-call memory

Caller history, commitments and context carry across calls — conversations resume, not restart.

Drop → auto-redial → resume

Call drops mid-sentence, the agent redials and picks up exactly where it left off.

Built for Indian languages

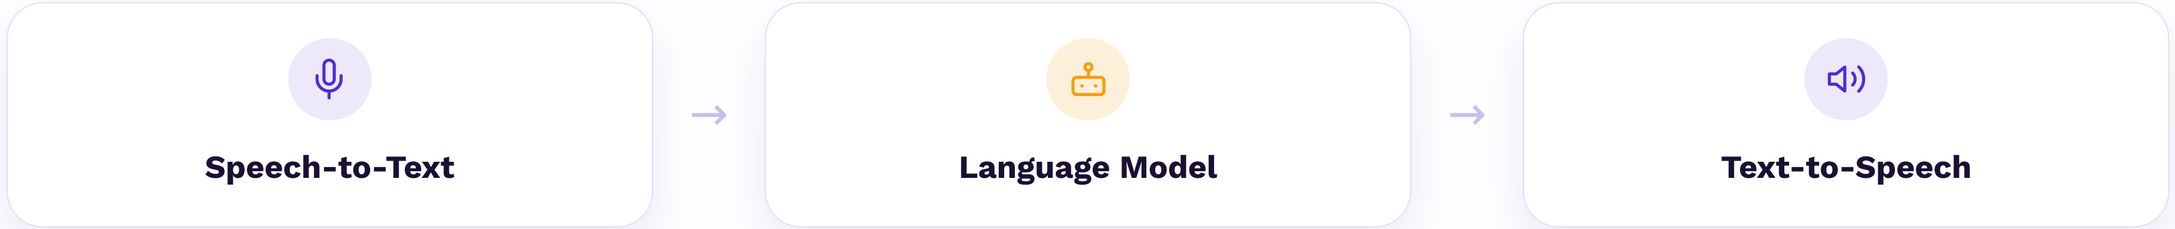

Tamil, Hinglish and Indian accents native, with low in-country latency.

Compliance built in

IRDAI, TRAI and DPDP designed in from day one.

HOW IT WORKS

Orchestration, not a single model

Provider-agnostic orchestration in TypeScript — swap the best or cheapest engine at every layer.

MEMORY LAYER — THE MOAT

Facts, commitments and episodes stored per caller, injected into every conversation.

Also works as an OpenAI-compatible proxy — other platforms point their `api_base` at SnapServe and get caller memory with zero code change.

WHY NOW

Three shifts are converging

01 **Voice AI just crossed the quality bar**

Indian-language STT, LLM and TTS became good and cheap in the last 12–18 months.

02 **India-first models have arrived**

Home-grown speech models handle Indian accents and code-switching; global platforms treat India as an afterthought.

03 **Regulation is forcing the shift**

DPDP, TRAI and IRDAI tightening rules make compliant-by-design automation a purchase driver.

COMPETITIVE LANDSCAPE

Where we win

Vapi, Retell, Bolna and others orchestrate calls. None of them remember callers.

CAPABILITY	SNAPSERVE	VAPI / RETELL / BOLNA
Persistent cross-call memory	✓	×
Dropped-call resume with full context	✓	×
Tamil / Hinglish native handling	✓	×
In-India latency	✓	×
IRDAI / TRAI / DPDP compliance built in	✓	×
Provider-agnostic STT / LLM / TTS	✓	Partial

MARKET OPPORTUNITY

A large, underserved market

$40B+

India BPM / contact-center industry — voice still the largest channel

Millions

of outbound calls daily across insurance, lending, collections, support

10x

cost advantage of AI calls vs human agents at scale

Beachhead: insurance & BFSI outbound in India (renewals, collections, verification) — high volume, compliance-heavy, badly served.

Expansion: UAE and Philippines on the same India cost base.

GO-TO-MARKET

Three ways in

DIRECT

Insurance & BFSI

Outbound campaigns for insurers and lenders, compliance-first pitch.

CHANNEL

SAP system integrators

SIs take SnapServe into SAP enterprise accounts, with collections/FSCM as the wedge.

PRODUCT-LED

The memory proxy

Platforms on Vapi, Bolna or Retell plug in SnapServe's memory with zero switching cost — we grow inside competitors' ecosystems.

TEAM

Built by people who've shipped it

Karthikeyan

FOUNDER · PRODUCT & BUSINESS

CMA US background, strong on unit economics and compliance. Non-technical founder who learnt AI hands-on and built the first prototype solo — knows the product to every nuance.

Gopi

CO-FOUNDER · ENGINEERING

Software engineer from CGI. Took SnapServe from prototype to production platform running live calls — owns the TypeScript orchestration stack end to end.

WHERE WE ARE

Built, now, next

BUILT

Full platform live in production

Multilingual calls with cross-call memory working in real conditions.

NOW

Just launched

Onboarding first pilot clients in insurance and enterprise; SI partner outreach underway.

NEXT

Convert pilots to paid campaigns

Ship the memory proxy publicly; expand language coverage.

Honest status: pre-revenue, product-complete, launch week.

The voice AI wave is here. The winner in India will be the one that remembers.

SnapServe — persistent-memory voice agents, built for India, live in production.
